Notes

a,d,e - The reduction in CET1 capital is primarily driven by regulatory deductions as well as revaluation of securities due to increase in USD rates

b & *f* - The reduction in ECL is mainly driven by overall improvement in economic scenario and write offs

c - The reduction in RWAs is mainly driven by change from Simplified to Comprehensive approach in calculating RWAs

g - The increase is due to higher investment in UAE CB M-bills

Notes:

a - The increase is mainly due to higher exposure in Reverse Repo transactions

b & c - The decrease in overall Off BS exposure relates to the reduction in the unconditionally cancellable exposure under Corporates. This is also the main reason of decrease in 'Adjustments for conversion to credit

d - The reduction in CET1 capital is primarily driven by regulatory deductions as well as revaluation of securities due to increase in USD rates

^{*} These includes Intra Group and third party reverse repo transactions
